

Muhamad Habibi Azmi

Bandung, Indonesia | habibiazmi.m@gmail.com | +62 813 9503 8967

SUMMARY

Full Stack Software Engineer with 7+ years of experience building web applications, internal platforms, and SaaS products. Experienced in developing Identity & Access Management systems, HR platforms, healthcare applications, and AI-assisted document processing solutions using Golang, Laravel, Python, React, Next.js, and PostgreSQL.

EDUCATION

STMIK-IM University

Bachelor of Computer Science, GPA: 3.51 / 4.00

Jul 2014 - Aug 2018

EXPERIENCE

Backend Engineer

Telkom Indonesia

Jan 2022 - present

Telkom Indonesia is Indonesia's leading telecommunications and digital solutions company, delivering connectivity, broadband, cloud, data center and enterprise services to millions of customers across the country.

- Contributed to stakeholder discussions, requirements gathering, and backend development of TGKypas, an Identity and Access Management (IAM) platform that automates access governance, approval workflows, compliance reviews, and audit trails, enabling centralized access reviews, and audit logging across the Telkom Group.
- Architected and developed TGSSO, an enterprise Single Sign-On (SSO) platform using Golang, implementing OAuth 2.0, LDAP integration, and centralized authentication services to enable secure access across internal and partner applications.
- Managed identity and access services for over 40,000 users (30K+ employees and 10K+ partner accounts), ensuring secure authentication, authorization, and account lifecycle management while improving operational efficiency and security compliance.
- Designed and developed secure RESTful APIs from scratch, delivering scalable integrations and comprehensive API documentation that accelerated collaboration between internal applications and development teams.
- Built an OCR and LLM based document processing service to extract and classify metadata from official memorandum and contract documents, reducing manual processing effort and improving document management accuracy.

Full Stack Software Engineer

Voxteneo

Dec 2023 - May 2024

VOX is a Belgium based software development and digital consulting company that delivers custom web, mobile, AI-powered, and enterprise solutions for clients across Europe.

- Delivered and enhanced products for European clients, Worked with European clients to design, develop, deploy, and maintain SaaS applications in production environments.
- Developed scalable features and integrations for ELAO, a language assessment platform used by universities, recruiters, and enterprises to automate language proficiency testing, candidate evaluation, and reporting workflows.
- Built and optimized learning experiences for Leapsy, a digital language learning platform, implementing personalized learning features, progress tracking, and content management capabilities to improve learner engagement.
- Designed and implemented backend services, APIs, database optimizations, and third-party integrations across multiple client platforms, improving scalability, maintainability, and operational efficiency.
- Integrated payment solutions using MangoPay and developed AI-powered text-to-speech capabilities, enabling automation and expanding platform functionality.
- Collaborated with distributed engineering teams across Europe within a Domain-Driven Design (DDD) environment, contributing to architecture discussions, code quality initiatives, and Agile software delivery.

Full Stack Software Engineer

CNT

Aug 2014 - Dec 2021

CNT IT Corporation is an Indonesia based IT consulting and software development company specializing in digital transformation, custom application development, cloud infrastructure, business analytics, and enterprise technology solutions. The company partners with organizations across healthcare, finance, non-profit, and public sectors to build scalable digital products and business platforms

- Led and mentored a team of 3 engineers in delivering a SaaS based Human Resource Information System (HRIS), applying Agile methodologies to improve delivery consistency and software quality.
- Designed and developed core HRIS modules, including role based access control (RBAC), payroll automation, attendance management, and employee administration workflows, streamlining HR operations and reducing manual processes.
- Architected reusable Vue.js component libraries and centralized state management with Vuex, improving maintainability, consistency, and development efficiency across HR and administrative modules.
- Developed a React Native mobile application for attendance tracking and workforce scheduling, implementing GPS-based check-ins and real-time notifications to support workforce management.
- Built and deployed an online patient registration and appointment management platform for Edelweiss Hospital, streamlining patient onboarding and improving the overall patient experience. Researched and prototyped AWS Chime SDK integration to support real-time video consultation capabilities.

PROJECTS

PEGI (Pan-European Game Information) | a europe's standardized video game content rating system, providing age classifications and content descriptors to help consumers and parents determine the suitability of games for different age groups.

- Developed and maintained core platform features using Laravel following the company's custom Domain-Driven Design (DDD) architecture, coding standards, and business workflows.
- Implemented video game submission and classification workflows, enabling publishers and administrators to manage rating applications throughout the review lifecycle.
- Built secure authentication and authorization modules, including user impersonation capabilities for customer support and administrative troubleshooting.
- Improved system maintainability and performance by following clean architecture principles, reusable domain components, and automated testing practices.

Leapsy | a language learning platform that helps educators create personalized exercises and track learner progress through web and mobile applications, combining microlearning, gamification, and data-driven learning experiences.

- Developed core platform features that enable educators to create, manage, and distribute personalized language-learning exercises across web and mobile applications.
- Integrated Text-to-Speech (TTS) services to generate natural-sounding audio content, Integrated Text-to-Speech services to generate audio content for language learning exercises and listening activities.
- Built content management workflows for educational materials, exercises, quizzes, and multimedia learning resources used by teachers and language center.
- Implemented learner progress tracking and analytics features, allowing educators to monitor engagement, performance, and learning outcomes in real time.

Edelweiss Hospital | a digital healthcare platform for Edelweiss Hospital that provides doctor schedules, online appointment booking, healthcare service information, medical facilities, and health education content for patients.

- Developed patient-facing web experiences that provide access to doctor schedules, hospital services, medical facilities, and healthcare information across multiple hospital branches.
- Built online appointment booking workflows, enabling patients to search doctors by specialty, view available schedules, and submit consultation requests digitally.
- Developed responsive interfaces for patient registration and appointment management, allowing patients to register and book appointments online without visiting the hospital.
- Integrated backend APIs and dynamic data sources to display real-time doctor availability, service information, and hospital facility content.
- Optimized website performance, responsiveness, and user experience across desktop and mobile devices to support patient self-service interactions.

Baznas Jabar | a digital fundraising and donation platform that enables individuals to contribute to zakat, infak, sedekah, and humanitarian campaigns through secure online payment channels while providing transparent reporting and campaign management capabilities.

- Designed and developed the donation platform from scratch, covering campaign management, donation workflows, and administrative operations.
- Built fundraising campaign modules that allow administrators to create, manage, monitor, and publish donation programs with real-time fundraising progress and campaign reporting.
- Integrated Midtrans payment gateway to support multiple payment methods, automate payment verification, and streamline end-to-end donation processing.
- Built administrative dashboards for monitoring donations, campaign performance, payment transactions, and donation reports.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Go, SQL, PHP

Frontend: React.js, Next.js, Vue.js, Nuxt.js, Tailwind CSS

Backend: Laravel, Gin, FastAPI, NestJS, Express.js, REST APIs

AI Engineering: LLM-powered Applications, OCR & Document Intelligence, Prompt Engineering, Structured Data Extraction, RAG Concepts, Vector Search (pgvector/pinecone), OpenAI API Integration, AI-powered Ranking & Classification

Databases & Infrastructure: PostgreSQL, Mysql, Supabase, Redis

Messaging & Event Streaming: RabbitMQ, Apache Kafka

Product & Integrations: Stripe, SaaS billing, real-time communication, dashboard development
